PROFILE

Curious and **driven Fullstack Developer** with a passion for building **scalable web applications**. Experienced in **JavaScript**, **TypeScript, React, Node.js, Express, MongoDB** and **CSS frameworks** such as **MUI, Bootstrap, Tailwind**, **Sass** and more. Hands on experience developing and testing applications using **RESTful APIs, Vitest/Jest**, and working with modern **Git workflows.** Also hands on experience in **serverless cloud solutions** on **AWS** using services such as **API Gateway, Lambda, DynamoDB**, and **S3.** Focused on **performance**, **responsive design,** and writing **clean, maintainable code.** I enjoy **solving complex problems, collaborating** with others, and continuously improving my skills as a developer.

EDUCATION

Full-Stack JavaScript Developer
Yrkeshögskola (YH) -Folkuniversitetet

08/2024 – present | Göteborg, Sweden

Full-Stack JavaScript Developer, Yrkeshögskola (YH) - Folkuniversitetet

Advanced React, Scrimba
Certificate

06/2022 – 01/2023 | Remote

Advanced React bootcamp

The Front End Developer Career Path, Scrimba
Certificate

06/2022 – 01/2023 | Remote

Front-end development bootcamp

The Front End Developer Bootcamp, Sundsgården
Certificate

08/2021 – 01/2022 | Helsingborg, Sweden

Front-end development bootcamp

SKILLS

FRONTEND

- HTML5
- CSS3
- JavaScript (ES6+)
- TypeScript
- CSS techniques (*CSS Modules, Sass / SCSS, Tailwind CSS, Bootstrap, Styled Components, Material UI (MUI)*)
- Responsive / Mobile-first Design
- Figma
- React.js
- Redux (*state management tool*)
- Storybook

BACKEND

- Node.js
- JavaScript
- Express.js
- SQL
- NoSQL
- PostgreSQL
- MongoDB
- Mongoose
- PgAdmin
- Swagger
- Postman
- AWS Cloud Development (*DynamoDB, AWS Lambda, API-gateway, S3, Amazon Eventbridge*)
- Using Serverless Framework

APIs

- AJAX
- REST APIs (*consume & build*)
- JSON

WORKFLOW & METHODOLOGIES

- Agile / Scrum
- MVC Architecture
- Git & GitHub
- Gerrit
- Visual Studio Code
- Folder structure & modular code
- Clean code principles
- CI/CD & Deployment (*Dockers, Github-actions, containerization*)
- Testing (*Unit Testing like Jest, Vitest & React Testing Library, MSW and TDD, Test Driven Development*)
- AI-assisted development using tools like ChatGPT and GitHub Copilot to automate tasks and enhance development efficiency

SOFTSKILLS

- Problem solver
- Team player
- Creative thinker
- Team collaboration & communication
- Adaptable
- Self-driven
- Open to feedback
- Curious
- Always eager to learn more
- Structured and organized
- Positive attitude
- Good sense of humor

basic

EXPERIENCE / PROJECTS

Volvo Group, VGCS/Digital Services

01/2026 – 06/2026 | Gothenburg

Software Developer (Intern) *January* 2024 – *June* 2024
JavaScript | React | TypeScript | REST APIs | Git | Agile / Scrum | Gerrit | Storybook | MUI | Jest | AI - tools

- Worked in a **trunk-based development** team, focusing on **maintenance and continuous improvement** of existing frontend applications.
- Maintained and refactored **React**-based codebases to **Typescript**, ensuring stability, readability, and long-term maintainability and also created tests using **Jest.**
- Developed and maintained reusable UI components using **MUI** as part of the company's internal UI component library and also implemented **Storybook** to it.
- Collaborated closely with designers and developers to align components with design guidelines and UX standards.
- Integrated and consumed **REST APIs** to support frontend functionality.
- Actively participated in **Agile/Scrum** ceremonies, including daily stand-ups, sprint planning, and sprint reviews.
- Used **Git** in a trunk-based workflow with **Gerrit** as a code review tool
- Leveraged **AI tools** (ChatGPT, GitHub Copilot) to assist with code generation, debugging, and test creation, improving development efficiency.

These projects below are just a few of my work. Visit my ***github*** or ***portfolio*** to explore more.

Thesis Project (Fullstack), Remember My Applications (RMA)

Githhub Live

React | AWS | MUI | Frontend | Backend | DynamoDB | S3 Bucket | API Gateway | Cloudwatch | Lambda | Eventbridge | Branchprotections | CICD Pipeline | Serverless | Typescript | Git /Github Workflow | API:s | JWT | Cloud Architecture | Github Actions

- Built an application to help users manage their job applications. When applying for many jobs, it can be difficult to keep track of everything, so the app makes the process more organized and easier to manage. Built using **React, TypeScript,** and **MUI** for the **frontend**.
- Users can save, update, and delete applications, set reminders to follow up using **EventBridge**, filter their applications, view statistics, and see on a map where in the world they have applied. The app also includes authentication with **JWT**, login and logout functionality, the ability to review the app, and file storage for documents such as CVs using **AWS S3,** which I also used for hosting the app.

ADDITIONAL INFORMATION

- Former teacher and youth educator with strong communication and pedagogical skills
- Passionate about clean code, UI/UX design and understanding the full development process
- Always curious to explore new frameworks, libraries and tech stacks
- Open to frontend / backend anywhere, full-time roles, trainee programs, remote work, or opportunities that may involve relocation.

- The **backend** was built using a **serverless cloud architecture** on **AWS,** utilizing **API Gateway, Lambda**, and **DynamoDB**, with **CloudWatch** for logging and monitoring. The project also includes a **CI/CD pipeline** that triggers actions using **Github actions**, **Git/GitHub workflow** with **branch protections**, and integration with **APIs.**

Portfolio

Github Live

React | Vite | React Router | EmailJS | React Slick | Clean Architecture

- Built a personal portfolio using **React** and **Vite** for fast performance and a modern development workflow.
- Designed with a **clean and scalable folder structure** to support future growth and easy maintenance.
- Used clientside routing with **React Router** for seamless navigation.
- Integrated a contact form using **EmailJS**, allowing messages without a backend.
- Used **React Slick** and **Slick Carousel** to create responsive, interactive galleries.
- Added a mobile friendly hamburger menu with **hamburger-react**
- Focused on accessibility, responsive design, and effective **state management** using React hooks.

Yum Yum Gimme Sum

Github

Live

React | Redux Toolkit | SASS | BEM | React Router | API | Vite

- Built a food ordering app using **React** and **Vite**, focusing on component-based structure and performance.
- Styled with **SASS** using the **BEM methodology** for clean and maintainable CSS.
- Managed global state with **Redux Toolkit**, including **store**, **slices**, and modular folder structure.
- **React Router DOM** for navigation between views.
- Connected to an **external API** to fetch and display dynamic content.

NoSQL Review Platform

Github

Node.js | Express | MongoDB | Mongoose | JWT | Bcrypt | REST API

- Developed a **backend-only review platform** using **Node.js**, **Express**, and **MongoDB**.
- Used data modeling with **Mongoose**, including advanced features like **populate**, **select**, and **aggregation pipelines** to process and relate complex data structures.
- Used **bcrypt** for password hashing and **JWT** for secure authentication.
- Built custom **middleware** to protect routes and enforce **role-based access control** for users and admins.
- No frontend is included – tested entirely with **Postman**

SQL Bulletin Board API

Github

Node.js | Express | PostgreSQL | MVC | REST API

- Built a **RESTful API** using **Node.js** and **Express**, with a **PostgreSQL** database designed via an ER diagram using **dbdiagram.io** .
- Applied **SQL JOINs** to relate and retrieve data across multiple tables.

- Structured the backend following the **MVC architecture** to separate concerns and improve maintainability.
- Fully tested using **Postman** to ensure functionality, data integrity, and error handling.
